

Choosing the Right Advanced Imaging Solution for Your Environment

The VISIX™ VX-VSS-20 Stereoscopic camera enters the VISIX Advanced Imaging line with a very specific purpose as a low-cost people counting camera for environments where people tracking such as dwell times and exit/entry are not required.

By providing a lighter version of the Time of Flight, 3xLOGIC is able to bring the cost of people counting into markets that don't require a broad range of installation options but still require the same cutting-edge and accurate people counting provided by the Time of Flight camera; all without compromising ease of installation. Both cameras provide automatic calibration foregoing the often complex and difficult calibration process required in order for the analytics engine to classify objects into different object classes.

With its state-of-the-art 3D imaging and specially designed lenses, the VX-VSS-20 is one of the most advanced and affordable people counting systems available in the marketplace today.
