## How to run a SQL Script in SQL Management Studio

Rule Actions and Door Templates can be added to Intelli-MAccess customizing the system to meet your needs. In both cases, infinias will provide a SQL Script that you will need to apply to add the desired functionality. These instructions will guide you through running a script successfully.

- 1: Go to start programs open SQL Server Management Studio.
- 2: Click on Connect.

3: On the left click on Databases and click on the infinias database.

- $\ \, 4: \, Now \, take \, the \, file \, I \, attached \, in \, this \, email \, and \, copy \, it \, to \, your \, desk \, top. \, \\$
- 5: Now in SQL Management Studio click File then click Open then File and point it to the script that you placed on the desk top from the email.

6: Now click the Execute button at the top.

7: After clicking the Execute the window will look like this and say ( Query executed successfully )

That's it you are done. You can close SQL Management studio.
